Red Hat Linux Firewalls

firewalld uses the concepts of zones and services, that simplify the traffic management. Zones are predefined sets of rules. Network interfaces and sources can be assigned to a zone. The traffic allowed depends on the network your computer is connected to and the security level this network is assigned. Firewall services are predefined rules that cover all necessary settings to allow incoming traffic for a specific service and they apply within a zone.

Chapter 5. Using Firewalls Red Hat Enterprise Linux 7 ...

As of Red Hat Enterprise Linux 6.5, the iptables and ip6tables services now provide the ability to assign a fallback firewall configuration if the default configuration cannot be applied. If application of the firewall rules from /etc/sysconfig/iptables fails, the fallback file is applied if it exists.
