Functional analysis in behavioral psychology is the application of the laws of operant and respondent conditioning to establish the relationships between stimuli and responses. To establish the function of operant behavior, one typically examines the "four-term contingency": first by identifying the motivating operations (EO or AO), then identifying the antecedent or trigger of the behavior, identifying the behavior itself as it has been operationalized, and identifying the consequence of ...

Functional analysis, Branch of mathematical analysis dealing with functionals, or functions of functions. It emerged as a distinct field in the 20th century, when it was realized that diverse mathematical processes, from arithmetic to calculus procedures, exhibit very similar properties.

Functional analysis | mathematics | Britannica

Functional Analysis an aggregate of chemical and physical methods of analysis, primarily for organic substances, that are based on the determination of reactive groups of atoms (individual atoms)—functional groups—in molecules. Examples of such groups are the hydroxyl ($-\text{OH}$), carboxyl nitro ($-\text{NO}_2$), and amino ($-\text{NH}_2$) groups.

That explains the second word in the name "functional analysis." Regarding "functional," this is an archaic term for a function defined on a domain of functions. Since most of the spaces we study are function spaces, like $C(M)$, the functions defined on them are "functionals." Thus "functional analysis." In particular, we define a linear functional ...

Thus if X is a linear space over C we have two kinds of functionals: C -linear and R -linear. More precisely C -linear functionals are $\Lambda : X \rightarrow C$, $\Lambda(ax+by) = a\Lambda x + b\Lambda y$, $a, b \in C$ and R -linear functionals are $\Lambda : X \rightarrow R$, $\Lambda(ax+by) = a\Lambda x + b\Lambda y$, $a, b \in R$. The functional $f: M \rightarrow C$ given in the assumptions of the theorem is clearly C -linear and we need find its C -linear extension. The functional $u = \text{ref}: M \rightarrow R$ is R -linear.

FUNCTIONAL ANALYSIS - University of Pittsburgh

Functional Analysis is primarily concerned with the structure of infinite dimensional vector spaces and the transformations, which are frequently called operators, between such spaces. The elements of these vector spaces are usually functions with certain properties, which map one set into another. Functional analysis became one of the success stories of mathematics in the 20th century, in the search for generality and unification.
