TOPOLOGICAL SPACES - GBV

A topological space, also called an abstract topological space, is a set together with a collection of open subsets that satisfies the four conditions: 1. The empty set is in . 2. is in . 3. The intersection of a finite number of sets in is also in . 4. The union of an arbitrary number of sets in is also in .

Topological Space : Definition & Problems With Answers

In topology and related branches of mathematics, a topological space may be defined as a set of points, along with a set of neighbourhoods for each point, satisfying a set of axioms relating points and neighbourhoods. The definition of a topological space relies only upon set theory and is the most general notion of a mathematical space that allows for the definition of concepts such as continuity, connectedness, and convergence. Other spaces, such as manifolds and metric spaces, are specializations

Topological space - Wikipedia

A manifold is a topological space that near each point resembles Euclidean space. Examples include the plane, the sphere, and the torus, which can all be realized in three dimensions, but also the Klein bottle and real projective plane which cannot be realized in three dimensions, but can be realized in four dimensions. Typically, results in algebraic topology focus on global, non ...

Algebraic Topology - Dover

In general topology, a homeomorphism is a map between spaces that preserves all topological properties. Intuitively, given some sort of geometric object, a topological property is a property of the object that remains unchanged after the object has been stretched or deformed in some way. For example, a space ...

topological spaces. The elements of these spaces are denoted by lowercase letters such as x , y , and z . The elements of a linear space are called vectors, but we refer to the elements of a linear topological space as points. An arbitrary set of vectors or points will be denoted by uppercase English letters such as A , B , E , F , and M , while the symbols U , V , and W will usually be reserved for open subsets of a linear topological space. 1

Idea. The term convenient category of topological spaces is used (e.g. Steenrod 67) for a category of topological spaces nice enough to address many of the needs of working topologists, notably including the condition of being a cartesian closed category. As such, they are examples of nice categories of spaces. A primary example is the category of compactly generated spaces.
