Adaptive Contrast Enhancement - FIXME one-liner goes here. Description. The basic "Stretch Contrast" operation takes in the whole image at once, and if there is a white pixel anywhere in the image and a black pixel anywhere in the image, it figures the contrast is already as good as can be. But Adaptive Contrast Enhancement works to increase the contrast locally, and brings out details that most wide-sweeping contrast-enhancements pass over.

Some Contrast Stretching techniques include: Minimum-Maximum, Percentage, and Piecewise Contrast Enhancement. Min-Max Contrast Stretching: In Min-Max Contrast Stretching for each pixel: pixel = ((pixel - min) / (max - min))*255. Where min and max are the maximum and minimum pixel values in the image. Adaptive image enhancement method using contrast ...

Contrast enhancement of color images is typically done by converting the image to a color space that has image luminosity as one of its components, such as the L*a*b* color space. Contrast adjustment is performed on the luminosity layer 'L*' only, and then the image is converted back to the RGB color space. Manipulating luminosity affects the intensity of the pixels, while preserving the original colors. Read an image into the workspace. The 'shadow.tif' image is an indexed image, so convert ...
