Optimization With Pde Constraints

Mathematical

PDE-constrained optimization is a subset of mathematical optimization where at least one of the constraints may be expressed as a partial differential equation. Typical domains where these problems arise include aerodynamics, computational fluid dynamics, image segmentation, and inverse problems.

PDE-constrained optimization - Wikipedia

Introduction. This book on PDE Constrained Optimization contains contributions on the mathematical analysis and numerical solution of constrained optimal control and optimization problems where a partial differential equation (PDE) or a system of PDEs appears as an essential part of the

constraints. The appropriate treatment of such problems requires a fundamental understanding of the subtle interplay between optimization in function spaces and numerical discretization techniques and relies ...

Optimization with PDE Constraints | SpringerLink

It provides a precise functional analytic treatment via optimality conditions and a state-of-the-art, non-smooth algorithmical framework. Furthermore, new structure-exploiting discrete concepts and large scale, practically relevant applications are presented. The main focus is on the algorithmical and numerical treatment of pde constrained optimization problems on the infinite dimensional level.

I I will discuss (a few) issues in PDE

constrained optimization that arise from the presence of the PDE (in contrast to 'just' large-scale finite dimensional constraints). I will focus on CLAPDE and interfaces, but not on optimization algorithms. I My research focusses on derivative based, Newton-type algorithms for PDE constrained optimization problems.

PDE Constrained Optimization - Department of Mathematical ...

Solving optimization problems subject to constraints given in terms of partial differential equations (PDEs) with additional constraints on the controls and/or states is one of the most challenging problems in the context of industrial, medical and economical applications, where the transition from

model-based numerical simulations to model-based design and optimal control is crucial.

Optimization with PDE Constraints (Mathematical Modelling ...

In mathematical optimization, constrained optimization (in some contexts called constraint optimization) is the process of optimizing an objective function with respect to some variables in the presence of constraints on those variables. The objective function is either a cost function or energy function, which is to be minimized, or a reward function or utility function, which is to be maximized. Constraints can be either hard constraints, which set conditions for the variables that are required
