Slab Track A Competitive Solution Esveld

Slab track, also called ballastless track, is a modern form of track construction which has been used successfully throughout the world for high speed lines, heavy rail, light rail and tram systems. Slab track technology offers proven higher performance in service and a longer life than traditional ballasted track.

Why build slab track? - Britpave

For high speed railway lines with a velocity of up to 300 km/h, slab track systems provide good performance and durable riding quality. Intense teamwork

and strong cooperation between civil engineers and geotechnical engineers is required in order to obtain a reliable design of the slab track systems.

The TW120 sleeper is used for embedded rail slab track construction in combination with Trelleborg pre-encapsulated rail, which is directly fixed by a Pandrol Nabla fastening system. This solution allows for rapid installation and accurate alignment of the track by using levelling inserts that are precast into the sleeper blocks.

Bögl (Max Bögl) The Bögl ballastless track is characterised by its use of prefabricated concrete slabs in lieu of a continuous structure that is cast on site. Mortar is used to connect the 9-ton-slabs to the infrastructure and to one another. The Bögl system was developed in Germany and first tested in Dachau in 1977.

Ballastless track - Wikipedia

The Shinkansen slab track (Figure 1, pg. 81) consists of a sublayer stabilised using cement, cylindrical "stoppers" to prevent lateral and longitudinal movement, reinforced pre-stressed concrete slabs measuring 4.93 m x 2.34 m x 0.19 m (4.95 m x 2.34 m x 0.16 m in tunnels) and asphalt cement mortar injected under and between the slabs.

SLAB TRACK Recent developments in slab track

This paper presents the design proposal of the prestressed concrete slab (PSCS) track used for highway-railroad grade crossings in Vietnam. A new type of highway-railroad grade crossings is being proposed to replace the traditional panel crossings made by reinforced concrete, asphalt concrete and rubber. Numerical simulation was carried out to analyze the structural behavior of the PSCS.

This step meant the formation of high speed railways. [1, 2] This modernization process led to appearing of the ballastless (slab) track systems in the middle of 1960s. The first country which...

(PDF) Ballasted Track versus Ballastless Track

Ballastless track, or 'slab track' is growing in popularity in some countries for high speed lines. In such a track, the rail is attached by resilient fasteners to a concrete base, typically 0.5 m thick.

NUMERICAL MODELING AND DESIGN OF SLAB TRACKS

Concrete slab track is a rail track technology that offers significant whole life cost benefits and long-term performance advantages. For train operators and their passengers these benefits translate into the provision of high quality, reliable, low maintenance

rail network. These benefits are proven by slab track's use throughout the world.

Slab track foundation The schematic model of the slab on foundation is shown in Figure 11. The concrete slabs were modeled using the Solid element to extract the load-deflection curves, and both Solid and Shell elements (with 6 degrees of freedom at each node) to obtain the cracking moments and elastic moments under service loads.

Mechanical properties of precast reinforced concrete slab ...

There are several ways that this can be achieved but they generally fall into two categories, isolated slab track (IST) or floating slab track (FST). Isolated Slab Track Isolated Slab track IST (often referred to generically within Europe, as floating slab track) consists of a concrete slab being constructed directly over a slab track mat. Tiflex, together with its sister company edilon)(sedra, can offer a range of T//R//S slab track mats to provide the most cost effective solution.

SLAB TRACK FOR COPENHAGEN METRO

In this work, an entire multi-rigid-body system with two-stage suspension systems is assumed to run on a slab track system, where the elastoplasticity of the track slab is modeled by Mindlin plate theory considered in a framework of three-dimensional vehicle-track dynamic system. Considering the elastoplasticity of track slabs, the nonlinearity and time- and stress-dependent track slab stiffness matrices must be accounted for in the time-domain dynamic solutions; therefore, a two-step ...
