Chapter 7 3 Answers Chemical

Equation 7.3.1 and Equation 7.3.2 are balanced chemical equations. What is different on each side of the equation is how the atoms are arranged to make molecules or ions. A chemical reaction represents a change in the distribution of atoms but not in the number of atoms. In this reaction, and in most chemical reactions, bonds are broken in the reactants (here, Cr-O and N-H bonds), and new bonds are formed to create the products (here, O-H and $\text{N}\equiv\text{N}$ bonds).
