In semi-structured interviews the researcher has a small core of questions or areas they wish to explore, but will then take the questions in different directions, depending on the answers they receive. Flexibility is important with this type of interview. This method is used when seeking richly descriptive information, eg what makes a good teacher.

https://doi.org/10.1137/15M1038803. In this paper, we present a local discontinuous Galerkin (LDG) method and two unconditionally energy stable schemes for the phase field crystal (PFC) equation. The semidiscrete energy stability of the LDG method is proved first. The PFC equation is a sixth order nonlinear partial differential equation (PDE), which leads to the severe time step restriction ($\Delta t=\mathcal{O}(\Delta x^6)$) of explicit time discretization methods to maintain stability.
