pressure) to the lateral earth pressure. For example, if the groundwater level is at a distance h from the base of the wall as shown in Fig. 3.6, the hydrostatic pressure is, $u = \gamma_w h$ (3.26) and the hydrostatic force is: $P = \gamma_w h^2 / 2$ (3.27) 3.7 Summary of Rankine Lateral Earth Pressure Theory 1.

CHAPTER THREE LATERAL EARTH PRESSURE

Introduction. Lateral earth pressure is the pressure that soil exerts in the horizontal direction. Retaining and sheet-pile walls, both braced and unbraced excavations, grain in silo walls and bins, and earth or rock contacting tunnel walls and other underground structures require a quantitative estimate of the lateral pressure on a structural member for either a design or stability analysis.
