Summary: The speed of the motor is measured in Rotations per Minutes,RPM.The RPM Meter is to read the running speed of Motor like DC

MOTOR. Here the speed of the DC Motor is sensed with the help of a speed sensor and it is signal conditioned to have pulses which given as Timer1 clock input of PIC Microcontroller, configured to accept external clock input.The count value in Timer1 for one second represents speed in seconds which can be converted into RPM by multiplying the count by 60.The ...

Microcontroller-Based Tachometer. Advertisement. A tachometer is nothing but a simple electronic digital transducer. Normally, it is used for measuring the speed of a rotating shaft. The number of revolutions per minute (rpm) is valuable information for

understanding any rotational system. For example, there is an optimum speed for drilling a particular-size hole in a particular metal piece; there is an ideal sanding disk speed that depends on the material being finished.

A tachometer, or revolution counter, measures the rotation speed of an object within a machine. The value is typically displayed in revolutions per minute (RPM) via analogue dial or digital display. Tachometers are used to measure speed of rotation and some can measure linear speed and distance too. How does it measure?

N (r p m) This also means that the wheel rotates from ω radians during one second. During that same second, the attached object (or point) travels a distance of $r \times \omega$. It implies that the speed of the object is also equal to $r \times \omega$. The conversion can be done thanks to the following formula: $(2) v (m.s^{-1}) = r \times \omega (rad.s^{-1}) = r \times 2\pi 60$.

Convert revolutions per minute [rpm] to meters per second ...

$\text{rpm} = (1000/\text{timetaken}) * 60$; Where $(1000/\text{timetaken})$ gives the rps (Revolutions per second) and it is multiplied by 60 to convert rps to rpm (Revolutions per minute). Now to calculate the velocity of the vehicle we have to know the radius of the wheel. In our project we have used a small toy wheel which has a radius of just 3cm.
