Markov Decision Processes in Artificial Intelligence [Book]

This chapter aims to describe FMDP s (Factored Markov Decision Processes), first proposed by [BOU 95, BOU 99]. FMDP s are an extension of MDP s that makes it possible to represent the transition and the reward functions of some problems compactly (compared to an explicit enumeration of state-action pairs).

Markov Decision Processes oAn MDP is defined by: oA set of states $s \in \mathcal{S}$ oA set of actions $a \in \mathcal{A}$ oA transition function $T(s, a, s')$ oProbability that a from s leads to s' , i.e., $P(s'|s, a)$ oAlso called the model or the dynamics oA reward function $R(s, a, s')$ oSometimes just $R(s)$ or $R(s')$ oA start state oMaybe a terminal state

Markov Decision Processes

Markov Decision process (MDP) is a framework used to help to make decisions on a stochastic environment. Our goal is to find a policy, which is a map that gives us all optimal actions on each state on our environment. MDP is somehow more powerful than simple planning, because your policy will allow you to do optimal actions even if something went wrong along the way.

Summary: Understanding Markov Decision Process (MDP) In this article, we'll be discussing the objective using which most of the Reinforcement Learning (RL) problems can be addressed— a Markov Decision Process (MDP) is a mathematical framework used for modeling decision-making problems where the outcomes are partly random and partly controllable. We'll discuss MDPs in greater detail as we walk through the article.

Understanding Markov Decision Process (MDP) - AI Summary

A Markov decision process (MDP) relies on the notions of state, describing the current situation of the agent, action affecting the dynamics of the process, and reward, observed for each transition between states.

In mathematics, a Markov decision process is a discrete-time stochastic control process. It provides a mathematical framework for modeling decision making in situations where outcomes are partly random and partly under the control of a decision maker. MDPs are useful for studying optimization problems solved via dynamic programming and reinforcement learning. MDPs were known at least as early as the 1950s; a core body of research on Markov decision processes resulted from Ronald Howard's 1960 bo

Artificial Intelligence: Markov Decision Process. In AI, sometimes, you need to plan a sequence of action that lead you to your goal. In stochastic environment, in those situation where you can't know the outcomes of your actions, a sequence of actions is not sufficient: you need a policy . Markov Decision Process is a mathematical framework that helps to build a policy in a stochastic environment where you know the probabilities of certain outcomes.
