Control and Prediction of Solid-State of Pharmaceuticals

Control and prediction of the organic solid state remains a fundamental and practical challenge, but one where multi-scale modelling, from using electronic structure theory through to predicting crystal structures and their bulk material properties, is showing promise.

Introduction. This thesis investigates a range of experimental and computational approaches to the discovery of solid forms. It illustrates an inexpensive, practical and accurate way to predict the crystallizability of organic compounds based on molecular structure alone, while also highlighting the molecular factors that inhibit or promote crystallization.
