Berkeley Database Java Edition Entity

Configures the primary database for an entity class using the Berkeley DB engine API. To be compatible with the entity model and the Direct Persistence Layer, the configuration should be retrieved using `getPrimaryConfig`, modified, and then

passed to this method. The following configuration properties may not be changed:
`ExclusiveCreate`

EntityStore (Oracle - Berkeley DB Java Edition API)

An `EntityModel` defines entity classes, primary keys, secondary keys, and relationships between entities. For each entity class that is part of the model, a single `PrimaryIndex` object and zero or more `SecondaryIndex` objects may be accessed via an `EntityStore`. The built-in entity model, the `AnnotationModel`, is based on annotations that are added to entity classes and their key fields.

EntityModel (Oracle - Berkeley DB Java

Edition API)

At this level, an index is a Btree managed by the Berkeley DB Java Edition transactional storage engine.

Although you may never need to work at the Base API level, keep in mind that some types of performance tuning can be done by configuring the underlying databases.

EntityIndex (Oracle - Berkeley DB Java Edition API)

collections from fictions to scientific research in any way. accompanied by them is this berkeley database java edition entity that can be your partner. Bibliomania: Bibliomania gives readers over 2,000 free classics, including literature book notes, author bios, book

summaries, and study guides.

Berkeley Database Java Edition Entity - parenthub.co.za

Berkeley DB, Java Edition comes in two flavors, Concurrent Data Store (CDS) and Transactional Data Store (TDS). The difference between the two products lies in whether you use transactions or not. Literally speaking, you are using TDS if you call the public API method, `EnvironmentConfig.setTransactional(true)`.

Oracle Berkeley DB Java Edition FAQ

The Oracle Berkeley DB family of open source, embeddable databases provides developers with fast, reliable, local persistence with zero

administration. Often deployed as an 'edge' database, Oracle Berkeley DB provides very high performance, reliability, scalability, and availability for application use cases that do not require SQL

Oracle Berkeley DB

Removes the specified value from this set if it is present (optional operation). If an entity binding is used, the key-value pair represented by the given entity is removed. If an entity binding is used, the first occurrence of a key-value pair with the given value is removed. This method conforms to the `Set.remove(java.lang.Object)` interface.
