Feature selection is also called variable selection or attribute selection. It is the automatic selection of attributes in your data (such as columns in tabular data) that are most relevant to the predictive modeling problem you are working on.

An Introduction to Feature Selection

Feature selection is the study of algorithms for reducing dimensionality of data to improve machine learning performance. For a dataset with N features and M dimensions (or features, attributes), feature selection aims to reduce M to M' and $M' \leq M$. It is an important and widely used approach to dimensionality reduction.
