This technique is usually used for extracting statistical texture features of a digital mammogram. For details on the Gray level Difference Method, refer the following paper J. K. Kim and H. W. Park, "Statistical textural features for detection of microcalcifications in digitized mammograms", IEEE Trans. Med. Imag. 18, 231-238 (1999).

LBP feature vector, returned as a 1-by-N vector of length N representing the number of features. LBP features encode local texture information, which you can use for tasks such as classification, detection, and recognition. The function partitions the input image into non-overlapping cells.

Extract local binary pattern (LBP) features - MATLAB ...

Feature extraction refers to the process of transforming raw data into numerical features that can be processed while preserving the information in the original data set. It yields better results than applying machine learning directly to the raw data. Feature extraction can be accomplished manually or automatically:

Feature Extraction - MATLAB & Simulink

```
X = 1:numCols; Y = 1:numRows; [X,Y] = meshgrid(X,Y);
featureSet = cat(3,gabormag,X);
featureSet = cat(3,featureSet,Y);
```

Reshape data into a matrix X of the form expected by the kmeans function. Each pixel in the image grid is a separate datapoint, and each

plane in the variable featureSet is a separate feature.

Texture Feature Extraction from a mammography Image ...

Texture analysis. Many of the aforementioned feature extraction and description techniques can be used to characterize regions in an image. This characterization can be used for texture analysis. Texture describes patterns with no known analytical description, which can then be used for pattern classification.
