AP-42, CH 11.7: Ceramic Products Manufacturing

The last-mentioned property determines the ceramic processing. The shaping process normally ends up with a so-called green body. Generally, ceramic materials must be finally densified by a sintering process, which provides their desired mechanical strength. This makes ceramics different from metals or polymers. With the exception of powder metallurgical products that are densified by a sintering process, metallic or polymeric components mainly attain their final properties already during the ...

Ceramics Processing - an overview | ScienceDirect Topics

Ceramic engineering is the science and technology of creating objects from inorganic, non-metallic materials. This is done either by the action of heat, or at lower temperatures using precipitation reactions from high-purity chemical solutions. The term includes the purification of raw materials, the study and production of the chemical compounds concerned, their formation into components and the study of their structure, composition and properties. Ceramic materials may have a crystalline or pa
