Conservation Of Mass And Answer

Antoine Lavoisier A portrait of Antoine Lavoisier, the scientist credited with the discovery of the law of conservation of mass. This law states that, despite chemical reactions or physical transformations, mass is conserved — that is, it cannot be created or destroyed — within an isolated system. In other words, in a chemical reaction, the mass of the products will always be equal to the mass of the reactants.

The Law of Conservation of Mass | Introduction to Chemistry

Answer:the law of conservation of mass or principle of mass conservation states that for any system closed to all transfers of matter and energy, the mass of the system must remain constant over time, as system's mass cannot change, so quantity can neither be added nor be removed. Hence, the quantity of mass is conserved over time.

Conservation of mass

Conservation of mass of reactant and product species is observed when a chemical reaction takes place. The law of conservation of mass is a very crucial aspect of chemistry.
