Understanding Viruses

Viruses are not cells but non-living, infectious particles. They are capable of causing a number of diseases, including cancer, in various different types of organisms. Viral pathogens not only infect humans and animals, but also plants, bacteria, protists, and archaeans.

Viruses: Structure, Replication, and Diseases

Alive or not, viruses are an indisputable

component of our planet's interdependent life systems. While virologists, scientists who study viruses, have worked diligently to understand, prevent and manage diseases caused by viruses, efforts have also been underway to understand viruses that are not responsible for disease.

Understanding Viruses, Third Edition

When germs, such as bacteria or viruses, invade the body, they attack and multiply. This invasion, called an infection, is what causes illness. The immune system uses

several tools to fight infection. Blood contains red blood cells, for carrying oxygen to tissues and organs, and white or immune cells, for fighting infection.

Understanding How Vaccines Work | CDC

We focus on six issues (the definition of viruses, the individuality and diachronic identity of a virus, the possibility to classify viruses into species, the question of whether viruses are living, the question of whether viruses are organisms, and finally the biological roles of viruses in ecology and evolution), and we show how they relate to classic questions of philosophy of biology and even general philosophy.
