Addy Pross explains how the emerging field of systems chemistry is providing insights into how life emerged from non-life. His working definition of life as "a self-sustaining kinetically stable dynamic reaction network derived from the replication reaction" typifies his thought-provoking explanation of this complex subject.

Addy Pross shows how the different kind of stability that operates among replicating molecules results in a tendency for chemical systems to

become more complex and acquire the properties of life. Strikingly, he demonstrates that Darwinian evolution is the biological expression of a deeper, well-defined chemical concept: the whole story from replicating molecules to complex life is one continuous process governed by an underlying physical principle.
