The Second Law of Thermodynamics
implies that heat will not transfer from a
colder to a hotter body without some
external source of energy. Conduction
involves the transfer of heat by the
interactions of atoms or molecules of a
material through which the heat is being
transferred.

Heat is energy transferred as the result
of a temperature difference. Neither

heat nor work are thermodynamic properties of a system. Heat can be transferred into or out of a system and work can be done on or by a system, but a system cannot contain or store either heat or work.
