Reconstructing a phylogenetic tree is really reconstructing the history of speciation. We often know very little about the evolutionary changes that occur within lineages, and often even less about extinctions, so speciation events become the major feature of phylogenetic trees. While speciation events lead to novel species and species traits, ancestral features are often preserved and passed on such that biologists can infer information about evolutionary relationships from shared features.

Speciation Themes | Shmoop

The scientific study of speciation — how species evolve to become new species — began around the time of Charles Darwin in the middle of the 19th century. Many naturalists at the time recognized the relationship between biogeography and the evolution of species. The 20th century saw the growth of the field of speciation, with major contributors such as Ernst Mayr researching and documenting species' geographic patterns and relationships. The field grew in prominence with the modern ...
