Images of Women in Hispanic Culture *Cambridge Scholars Publishing*

This book studies the ways traditional polarized images of women have been used and challenged in the Hispanic world, especially during the 20th century and the beginning of the 21st century by writers and the media, but also in earlier time periods. The chapters analyze the image of women in specific political periods such as Francoism or the Kirchners’ administration, stereotypes of women in films in Mexico and Chile, and the representation of women in textbooks, among other topics. Contributions also show how two women writers, in the 17th and the 19th centuries, viewed the role of women in their society.

Biodiversity in Agricultural Landscapes of Southeastern Brazil *Walter de Gruyter GmbH & Co KG*

The state of São Paulo, Brazil, is one of the most densely populated and developed areas in South America. Such development is evident both in terms of industrialization and urbanization, as well as in agriculture, which is heavily based on sugar cane, Eucalyptus plantations and livestock. This intense land use has resulted in great alteration of the original land cover and fragmentation of natural ecosystems. For these reasons, it is almost a paradox that jaguar, a species that requires large areas of pristine forest to exist, is still found in some parts of the state of São Paulo. It is possible that wild animals could leave in coexistence with intense land use, or is it the case that such rare encounters with large wild animals in São Paulo will disappear in the near future? All ecologists are aware of the problems of habitat changes caused by humans, but it was not until recent years that researchers started to consider that the land used for production could also serve as an important habitat for many different kinds of wild species.

This book is about this new approach to conservation. It also highlights the important role that sciences could and should have in this discussion in order to better understand the problems and propose possible solutions.

la moralidad del parentesco y las nuevas tecnologías de reproducción Edicions Universitat Barcelona

Ante los debates en torno a las tecnologías de la reproducción humana, el autor plantea una pregunta básicamente etnográfica ¿Cómo la gente experimenta y da sentido a estas tecnologías? Para resolver la cuestión analiza diferentes aspectos de las relaciones de parentesco en contextos de la reproducción asistida, desde la fragilidad vivida de los hechos de la reproducción, la incertidumbre ante los conocimientos de la reproducción, hasta las conexiones cambiantes que se establecen entre naturaleza y cultura. Resalta el aspecto de mediación de los conocimientos del parentesco como uno de los principales instrumentos que tiene la gente para pensar y dar sentido a las tecnologías de la reproducción ¿Cómo dar sentido a un gameto? ¿Cómo entender la filiación a través de las donaciones? ¿Cómo entender la herencia? ¿Cómo comprender las posibilidades que la nueva genética nos proporciona? Se pregunta por las implicaciones de las tecnologías para analizar cómo la gente piensa las relaciones de parentesco del futuro ¿Qué sucede cuando la "sustancia biogenética" es el resultado de los "hechos de la reproducción asistida", es decir, cuando la biología de la reproducción es asistida por la tecnología? ¿Cuáles son las transformaciones de las relaciones de parentesco actuales? Estableciendo un diálogo con las nuevas teorías del parentesco, analiza los valores que sustentan las prácticas de las relaciones de parentesco ¿Cómo las tecnologías de reproducción humana son un elemento para pensar y hacer explícitos valores surgidos a partir de la división moderna entre naturaleza y cultura? ¿Qué sucede a la cultura cuando la naturaleza es asistida? ¿Qué pueden decirnos otros sistemas de parentesco que no se fundamentan en la división entre naturaleza y cultura?

Aportes de la biología del suelo a la agroecología Universidad Nacional de Colombia

La agroecología es la ciencia de encuentro de los sistemas biológicos y sociales en torno a la planificación, diseño y construcción de agroecosistemas sostenibles. Su práctica, ciencia y movimiento social trasciende las fincas y se inserta en la tierra viva desde diferentes perspectivas en lo local, territorial, regiones, países y globalmente. Ahora comprendemos que la vida surge sobre la cooperación y las sinergias antes que sobre la competencia. La evolución del suelo-tierra vivo ilustra ampliamente esta enseñanza. Le es inherente la biodiversidad, propia de la complejidad ecosistémica, imitada por los campesinos y agricultores al establecer agroecosistemas ecológicos. El suelo vivo es espacio de innovaciones metabólicas y de comportamientos que propician la homeóstasis agro y ecosistémica.

Ecological Dimensions for Sustainable Socio Economic Development WIT Press

This book fills a gap in the literature on environmental sustainability by addressing the topic from the perspective of social and economic development. Progress in understanding and achieving sustainability requires the integration of scientific, social, economic, and legal issues. Yet progress in understanding and achieving sustainability will only be achieved through integration of scientific, social, economic, and legal aspects. A treatise on environmental sustainability should raise the current state of knowledge by proposing and recommending decision-making efforts and breaking new ground with agendas aimed for the younger generation. These younger scientists will be confronted with future uncertainty related to the set of crises that characterise the 21st Century (e.g. ecological, social, food, energy, environmental, climatic, financial, etc.). Currently, there are a number of indicators that demonstrate that ecological conditions are being compromised globally. These include reduced primary productivity, reduction in biological complexity, spreading pollution such as eutrophication, ecological degradation in any continental/basin/coastal/sea ecosystem, reduction in biodiversity, lowered resilience and slow recovery of damaged ecosystems, and reduced ecological integrity. All of these problems are related to social and economic pressure. The challenge for most ecological systems is not only to establish the baseline for current ecosystem conditions, but also to explore options for recovery and sustainability. The latter involves ecological restoration where ecosystem and environmental services are maintained and enhanced. These services are essential to social integration and economic development. This book not only introduces a theoretical and conceptual framework for the topic, but also analyses the uncertainty for sustainability because of dwindling natural resources. It includes contributions providing a basis for public policies, case studies integrating concepts and tools for solutions, and a set of position papers addressing new agenda topics that will shape the 21st century. The book will be useful for researchers, professors and students alike, as well as for all stakeholders from social, economic and academic sectors.

You're Looking Very Well

The Surprising Nature of Getting Old Faber & Faber

We now live longer today than at any time in history. In the UK, more people are aged over sixty-five than under sixteen and by 2050, over a third of the developed world will be over sixty. How should we deal with this phenomenon? What are the scientific reasons for ageing? And can - or should - we prevent it?Lewis Wolpert, distinguished biologist and octogenarian, explores the scientific background and the implications of our ageing population. In this engaging investigation, he tackles every aspect of the subject from ageism to euthanasia to anti-ageing cream and, through it all, tries to better understand his own ageing. Witty, frank and often inspiring, Lewis Wolpert is the perfect guide to looking very well.
