Vegetation Dynamics And Global Change

The objective was implemented by our initiation of a mathematical model of global vegetation, including agriculture, as defined by the forces which control and change vegetation. The model was to illustrate the geographical consequences to vegetation structure and functioning of changing climate and land use, based on plant responses to environmental variables.

Vegetation Dynamics & Global Change | SpringerLink

Vegetation Dynamics and Global Change will introduce both students and professionals to the sophisticated mathematical and computational tools used to predict the rate of change in the world's forests. It emphasizes the importance of scale in global studies.

As a palaeoecologist and biogeographer I am delighted to have become a Subject Editor for Plant Ecology & Diversity (PE&D). In my new role for the journal I hope to handle a broad range of articles within my area “Global Change & Vegetation Dynamics: Past, Present & Future”. As Subject Editor, as well as organizing general submissions, I would also like to promote a range of articles ...

Plant Ecology & Diversity: Global Change & Vegetation Dynamics

Vegetation dynamics strongly corresponded to climate change: A significantly increasing trend in vegetation growth was observed in the eastern part of Central Asia, whereas a significantly decreasing trend was found in the western part of Central Asia.

Vegetation Dynamics and Global Change . By A.M. Solomon and H.H. Shugart. Abstract. In the greenhouse debate, one of the most critical questions is how the world's forests will respond to a changing climate. This book introduces ecologists, environmentalists, foresters and earth scientists to the models which describe the forests and their rate ...

Vegetation Dynamics and Global Change - CORE

The vegetation dynamics model is the Lund-Potsdam-Jena (LPJ) dynamic global vegetation model. The land model is the National Center for Atmospheric Research (NCAR) Land Surface Model (LSM). Vegetation is defined in terms of plant functional types.

A dynamic global vegetation model for use with climate ...

The circumpolar vegetation dynamics product comprises four layers, i.e., start (SOS), end (EOS), length of growing season (LOS), and growing season integrated annual normalized difference vegetation index (NDVI) (Table 1, Table 2). As an example application for global change studies, we also present the responses of the circumpolar vegetation dynamics to long-term trend and interannual variability of dominant global change indicators in the region.

A Dynamic Global Vegetation Model (DGVM) is a computer program that simulates shifts in potential vegetation and its associated biogeochemical and hydrological cycles as a response to shifts in climate. DGVMs use time series of climate data and, given constraints of latitude, topography, and soil characteristics, simulate monthly or daily dynamics of ecosystem processes.

Dynamic global vegetation model - Wikipedia

Global Vegetation Dynamics: Concepts and Applications in MC1 model will be a valuable resource for students and researchers in the fields of climate change science, conservation science, biogeochemistry and ecology, as well as for land managers looking for a better understanding of the projections of climate change impacts and of the tools that have been developed to produce them.

Global Vegetation Dynamics | Geophysical Monograph Series

A modelling approach to simulating vegetation dynamics is described, incorporating critical processes of carbon sequestration, growth, mortality and distribution. The model has been developed to investigate the responses of vegetation to environmental change, at time scales from days to centuries and from the local to the global scale.

Vegetation dynamics--simulating responses to climatic change.

Vegetation has been altered by anthropogenic global change drivers including land-use change, altered disturbance regimes, invasive species, and climate change, for decades to centuries, or in some cases millennia. Vegetation responses to land use and disturbance can be more immediate than to climate change and can be long lasting.

Global change and terrestrial plant community dynamics | PNAS

Land-use change in the Andes between 2001 and 2014 resulted in the loss of ~500,000 ha and a gain of ~1,000,000 ha of woody vegetation cover, emphasizing the importance of land-cover redistribution as a process at least as important as the overall net change (Aide et al., 2013; Nanni & Grau, 2014). In the foothills of the Andes (1,000–1,500 m), the overall pattern was forest loss mainly caused by an increase in pastures and croplands.

Knowledge of the current changes and dynamics of different types of vegetation in relation to climatic changes and anthropogenic activities is critical for developing adaptation

strategies to address the challenges posed by climate change and human activities for ecosystems.

The ecosystems in this system are intensely sensitive to global climate change [Chen et al., 2009], and the rising temperatures and increased evaporation are accelerating the soil water consumption. This, coupled with a significant decline in water storage and shallow groundwater levels, is causing the shallow roots of desert plants to die.
