Data is being accumulated, stored and transformed to resources and knowledge at an incredible rate. Database and data management provide crucial properties to make data systems useful and convenient: reliability, efficiency, scalability, concurrency control and high-level query languages. Data Mining pulls from existing information to seek out patterns that can make intelligent use of data repositories.

Computing with Data introduces basic computing skills designed for industry professionals without a strong computer science background. Written in an easily accessible manner, it serves as a self-study guide to survey data science and data engineering for those who aspire to start a computing career or expand on their current roles, in areas such as applied statistics, big data, machine learning, data mining, and informatics.

Computing with Data

The complete data-mining process involves multiple steps, from understanding the goals of a project and what data are available to implementing process changes based on the final analysis. The three key computational steps are the model-learning process, model evaluation, and use of the model. This division is clearest with classification of data.
