In mathematics, the tensor algebra of a vector space V , denoted T or $T^\bullet$, is the algebra of tensors on V with multiplication being the tensor product. It is the free algebra on V , in the sense of being left adjoint to the forgetful functor from algebras to vector spaces: it is the "most general" algebra containing V , in the sense of the corresponding universal property. The tensor algebra is important because many other algebras arise as quotient algebras of T . These include the exterior ...

For example the 4x4 matrix of your tensor product can be viewed as a simple geometric structure in Clifford algebra, composed of basis vectors e_1 , e_2 , and the bivectors obtained by multiplying every combination of basis vectors e_1*e_1 , e_1*e_2 , e_2*e_1 , e_2*e_2 , which you can picture as the plane areas defined by the wedge product of the two vectors (the surface of the parallelogram defined by the two vectors) but that plane area also has a twist, that rotates from a to b for $a*b$, and from b to a ...
