IBM introduced the AS/400 system in 1988. It was an integrated system featuring hardware (AS/400) and an operating system (OS/400), along with many core functions such as an integrated database. Both the hardware and the software have gone through many upgrades, revisions, and name changes over the years. While many still refer to the system as an AS/400 or sometimes an iSeries IBM server, today’s hardware is technically Power Systems, which runs an updated operating system called IBM i.

Introduction ¶. The IBM i is a widely used platform for core-banking and wealth and retail systems. It is the current version of the operating system previously called i5/OS, and originally named OS/400 when it was introduced with the AS/400 computer system. Geneos has the capability to monitor the IBM i remotely using the JTOpen library, which is the open source version of the IBM Toolbox for Java, and is a library of Java classes that allows access to IBM i resources.
