Millipore uses the Vmax test, a constant pressure test, for the selection and sizing of filters with such fluids. The speed, reliability and versatility of Vmax testing allow the entire filtration train (from the first prefilter to the final filter) to be designed in a very short time.

Filter Selection and Sizing Methods - Membrane Solutions

In this range, the capacity term V_B / V_{max} contributes significantly to the overall area requirements. For nonplugging fluids (e.g., buffers), the V

max filter capacity value is very high ($>>5,000 \text{ L/m}^2$). So the V_B / V_{max} term is relatively small compared with the $V_B / J_i \times t_B$ term in Equation 1. In such cases, Equation 1 may be reduced to Equation 2, which indicates that buffer filtration sizing may be approximated based on membrane filter permeability and process time.
