Linear Programming Answers

Answers: A:1 Linear programming is a quantitative technique for selecting an optimum plan. It is an efficient search procedure for finding the best solution to a problem containing many interactive variables. The desired objective is to maximize some function e.g., contribution margin, or to minimize some function, e.g., costs. Determination of the optimum objective is usually

subject to various constraints or restrictions on possible alternatives.

Linear Programming Questions and Answers

Linear programming offers the most easiest way to do optimization as it simplifies the constraints and helps to reach a viable solution to a complex problem. In this article, we will solve some of the linear programming problems through graphing method.

Linear programming solution examples

The “answer” to a linear program is a set of values for the problem variables that results in the best — largest or smallest — value of the objective function and yet is consistent with all the constraints. Formulation is the process of translating a real-world problem into a linear program.

CHAPTER 11: BASIC LINEAR PROGRAMMING CONCEPTS

Now, we have all the steps that we need for solving linear programming problems, which are: Step 1: Interpret the given situations or constraints into inequalities. Step 2: Plot the inequalities graphically and identify the feasible region. Step 3: Determine the gradient for the line representing the solution (the linear objective function).
