Information theory and coding are the mathematical treatment of the ideas, parameters, and rules overseeing the transmission of messages through

communication frameworks. It was established by Claude Shannon toward the center of the twentieth century and has advanced into an incredible branch at the interface among arithmetic and communication theory, encouraging the enhancement of other logical fields, for example, science, social science, neuroscience, and measurable mechanics.

Information theory is a broad and deep mathematical theory, with equally broad and deep applications, amongst which is the vital field of coding theory. Coding theory is concerned with finding explicit methods, called codes, for increasing the efficiency and reducing the error rate of data communication over noisy channels to near the channel capacity.

Coding theory is the study of the properties of codes and their respective fitness for specific applications. Codes are used for data compression, cryptography, error detection and correction, data transmission and data storage. Codes are studied by various scientific disciplines—such as information theory, electrical

engineering, mathematics, linguistics, and computer science—for the purpose of designing efficient and reliable data transmission methods. This typically involves the ...
