Owing to the complex interaction of vehicles with the environment and different traffic participants, an almost infinite number of possible scenarios and situations that need to be considered may exist. The book explains new methods to address this complexity, with reference to human interaction modelling, various theoretical approaches to the definition of real-world scenarios, and with practically-oriented examples and contributions, to ensure efficient development and

testing of ADAS and ADF. Control Strategies for Advanced Driver Assistance Systems and Autonomous Driving Functions is a collection of articles by international experts in the field representing theoretical and application-based points of view. As such, the methods and examples demonstrated in the book will be a valuable source of information for academic and industrial researchers, as well as for automotive companies and suppliers.

**Advanced
Macroeconomics**
McGraw-Hill Education

The fifth edition of Romer's Advanced Macroeconomics continues its tradition as the standard text and the starting point

for graduate macroeconomics courses and helps lay the groundwork for students to begin doing research in macroeconomics and monetary economics. Romer presents the major theories concerning the central questions of macroeconomics. The theoretical analysis is supplemented by examples of relevant empirical work, illustrating the ways that theories can be applied and tested. In areas ranging from economic growth and short-run fluctuations to the natural rate of unemployment and monetary policy, formal models are used to present and analyze key ideas and issues. The book has been extensively revised to incorporate important

new topics and new research, eliminate inessential material, and further improve the presentation.

PRAISE FOR THE

wisdom and
experience about

analytics, this book's
greatest strength is its
lifecycle approach.

From framing the
question to getting
results, you'll learn

how analytics can
really have an impact
on organizations."

—Thomas H.
Davenport, Ph.D.,
Author of *Competing

"This book condenses a
lot of deep thinking on
the wide field of
analytics strategy.

Analytics is not
easy—there are no
quickie AI/BI/ML
shortcuts to
understanding your

data, your business, or
your processes. You

have to build a diverse
team of talent. You

have to respect the
hazards of 'fishing
expeditions' that may

need false-discovery-
rate adjustments. You

should consider
designed experiments
to get the true

behavior of a process,
something that
observational data may

hint at, but not provide
complete
understanding. There

are dimensions of data
wrangling, feature
engineering, and data

sense-making that all
call for different skills.
But with deep

investment in analytics
comes deep insight
into processes and

tremendous
opportunity for
improvements. This
book puts analytics in
the context of a

strategic business system, with all its dimensions." —John Sall, Ph.D., SAS co-founder and chief architect of JMP "The Analytics Lifecycle Toolkit provides a clear prescription for organizations aiming to develop a high-performing and scalable analytics capability. Greg organizes and develops with unusual clarity some of the critical nontechnical aspects of the analytics value-chain, and links them with the technical as building blocks in a comprehensive practice. Studying this map of how to negotiate the challenges to effectiveness and efficiency in analytics could save organizations months, or even years of painful

trial and error on the road to proficiency." —Scott Radcliffe, Executive Director, Data Analytics at Cox Communications "Many books exist that answer the question 'what is the right tool to solve a problem?' This is one of the few books I've read that answers the much more difficult question 'how do we make analytics become transformative throughout our organization?' Incorporating elements of data science, design thinking, and organizational theory, this book is a valuable resource for executives looking to build analytics into their organizational DNA, data scientists looking to expand their organizational reach, and analytics programs

that teach students not just how to do data science, but how to use data science to affect tangible change."

—Jeremy Petranka, Ph.D., Assistant Dean Master of Quantitative Management at Duke University's Fuqua School of Business
"This book is the 'thinking person's guide to analytics.' Greg has gone deep on some topics and provided considerable references across the analytics lifecycle. This is one of the best books on analytics I have read...and I think I have read them all!"
