Local Anaesthesia In Dental Surgery PDF

Local anaesthesia is when a part of your body is numbed with a medicine called a local anaesthetic. A local anaesthetic works by temporarily blocking the way your nerves carry pain signals to your brain. You're still awake and aware of what's going on around you, but you can't feel any pain, usually just some touch and pressure sensations.

Local anaesthesia | Health Information | Bupa UK

Local anesthesia is a type of pain prevention used during minor procedures to numb a small site where the pain is likely to occur without changing the patient's awareness. You are likely familiar with local anesthetics being used for dental procedures and for numbing an area that needs to be stitched. Hero Images / Getty Images

Types of Local Anesthesia For Surgery Procedures

Local Anesthetic When you hear the word anesthesia, you likely think of general anesthesia, which is used for major surgeries where the patient needs to be unconscious in order to operate. However, most dentists use local anesthesia, which only numbs a small area to prevent pain.
