Filtering of Signals. Filtering of signals by linear systems (or computing the time response of a system) is done by the function `flts` which has two formats . The first format calculates the filter output by recursion and the second format calculates the filter output by transform.

How to Use Scilab to Analyze Amplitude-Modulated RF Signals
The frequency-domain effects of amplitude modulation are fairly straightforward: the fundamental mathematical operation in an AM system is multiplication, and multiplication causes a spectrum to shift such that it is centered on a
