In finance, the binomial options pricing model (BOPM) provides a generalizable numerical method for the valuation of options. Essentially, the model uses a "discrete-time" (lattice based) model of the varying price over time of the underlying financial instrument, addressing cases where the closed-form Black-Scholes formula is wanting. The binomial model was first proposed by William Sharpe in the 1978 edition of *Investments* (ISBN 013504605X), and formalized by Cox, Ross and Rubinstein in ...
