A middle-aged cat with labored breathing, intermittent lameness, and perhaps behavioral changes may have myocardial disease (most commonly hypertrophic cardiomyopathy, resulting in heart failure or aortic thromboembolism), whereas an older cat with weight loss and behavioral changes is likely to have hyperthyroidism, which can result in systemic hypertension and exacerbate cardiac disease.

Diagnosis of Cardiovascular Disease in Animals ...

Canine dilated cardiomyopathy is a fatal

disease in which the muscle fibers contract weakly. Then, the muscles of the heart's walls become thinner and the chambers, that is, the ventricles and atria, get bigger. As a result of this disease, the heart gets bigger and loses its original shape, since its muscles ...

Animal cardiovascular diseases - Animal Wised

Based on these contractile kinetics, the ability to increase heart rates in small animal models is impaired relative to humans, which can typically increase by up to approximately three-fold. In contrast, the heart rate of mice can increase by about 30-40% under exercise conditions, which limits cardiac reserve and is an important consideration in the design of exercise

studies.

Small animal models of heart failure | Cardiovascular ...

Dogs showing signs of heart disease may have a history of exercise intolerance, weakness, coughing, difficulty breathing, increased breathing rate, abdominal swelling (caused by fluid pooling in the abdomen), loss of consciousness due to lack of blood flow to the brain (fainting), a bluish tinge to skin and membranes due to a lack of oxygen in the blood, or loss of appetite and weight.
