Subcortical Structures And Cognition Implications

Subcortical Structures and Cognition
 breaks with this traditional view, arguing
 for a practice-oriented rethinking of
 brain organization. The authors'
 structural/functional analysis redefines
 the cerebral hemispheres, basal ganglia,
 and cerebellum as operating in parallel
 to control cognition, affect, and behavior
 as well as movement.

Subcortical Structures and Cognition: Implications for ...

This is particularly true in relationship to
 findings from affective neuroscience,
 where the evidence is that we share a

fundamental group of subcortical architectures related to the generation of all prototype emotions such as fear, rage, lust, play, separation distress, and so forth (see Panksepp, 1998, for a detailed and now classic explication). Although the massive explosion of cognition and language processing clearly transforms prototype emotion in humans, our cognized emotions retain ...

Clinical psychologists and neuropsychologists are traditionally taught that cognition is mediated by the cortex and that subcortical brain regions mediate the coordination of movement. However, this argument can easily be challenged based upon the anatomic organization of the brain. The relationship between the prefrontal cortex/frontal lobes and basal ganglia is characterized by loops from ...

Koshiyama et al. (2018) examined correlates between subcortical

structures and cognitive and social function in schizophrenic patients with a mean illness of 11 years; these results may be affected by medication and the duration of illness. We pursued the present study to determine whether subcortical structural deficits contribute to cognitive impairments in first-episode schizophrenia.
