I assume that it means that the proportionality is not fixed, but has a random variance of some sort. There is a proportionality, but it is not a very precise proportionality because it includes a lot of chaos (kind of like human height and diet: there is a relationship but it is not very well defined in magnitude;`lots of room for variation from other causes).

Definition of attributable proportion The attributable proportion, also known as the attributable risk percent, is a measure of the public health impact of a causative factor. The calculation of this measure assumes that the occurrence of disease in the unexposed group represents the baseline or expected risk for that disease.
