Deflection Of Concrete Floor Systems

The primary reasons for deflection control are: v A concrete floor should possess adequate stiffness to mitigate damage to non-structural elements due to floor's deflection. v The deflection of a floor should not be large enough to be noticeable by occupants, and convey a sense of inadequacy, safety concerns or discomfort.

DEFLECTION OF CONCRETE FLOOR SYSTEMS FOR SERVICEABILITY

Deflection Calculation of Concrete Floors

Allowable deflection is generally expressed as a fraction of the span, in inches. All structural members will deflect or flex under load. The amount of flex depends on the magnitude of the load applied, span of the member, and stiffness of the member. Typically for better performing floors minimal defection is desired.

Two-Way Flat Plate Concrete Floor System Design

Designed to span in either one direction (one-way) or both directions (two-way) of a structural bay, the range of concrete floor systems available are created to economically and efficiently account for the numerous and specific demands of each building project. During the design process, especially the initial planning stages of a project, the inherent expenses of concrete (30% cost), reinforcement (15% cost), and formwork (55% cost) should be considered and evaluated when choosing the ...

Deflection Limits for Floor Trusses

Slabs on Beams This type of floor system is economically viable for spans ranges from 6 to 9m and live load of 3 to 6kN/m². taken into account in deflection calculations using a method known as the effective modulus method: an effective concrete elastic modulus $E_{composite}$ can be used to account for the different ages at which loads are applied and their duration. $E_{composite} = w_i / w_i / E_{effi}$ 2 Where $E_{effi} = E_c / (1 + i)$ i denotes the load increment.

CASE STUDIES ON APPLYING BEST PRACTICE TO IN-SITU CONCRETE ...

Due to the density of concrete and its limited deflection, concrete floors inherently do not cause sound transmission when walked on. Pest Resistant. Concrete products are completely resistant to vermin, rot and termites. It is inorganic and of no nutritional interest to pests thus the structure will remain intact for the life of the building.
