Hd Twin Cooled Engine

When Harley launched the 2014 model range this week they introduced a new Twin-Cooled 103 and 110 engine to the range. By Twin-Cooled they mean that water and coolant is used to cool the heads near the exhaust ports where most of the heat is generated. It seems this has largely been done for rider comfort and to pass tough new emissions laws.

Harley Twin-Cooling explained - Motorbike Writer

Some people might assume that the term “liquid-cooled” refers to a full-blown, water-cooled engine, but Harley’s so-called Twin-Cooled power plants use both oil and water for thermal relief, applying coolant only to the cylinder heads (which leaves the engine block cooled by oil and air), and focuses the cooling effort towards the hottest part of the heads: the exhaust valves.
