Solutions to B. Mendelson: Introduction
to Topology. This book is meant to cover
a basic topology course for
undergraduates and I found it very
approachable even with my limited
background in pure math. Moreover,

being about 200 pages long and
published by Dover, it costs the
equivalent of a cheap lunch. The
exercises are (so far) not very long and
complicated, so I just attempted to write
and scan them as I go and post in
batches.

In the second chapter Professor
Mendelson discusses metric spaces,
paying particular attention to various
distance functions which may be defined
on Euclidean n -space and which lead to
the ordinary topology. Chapter 3 takes
up the concept of topological space,
presenting it as a generalization of the
concept of a metric space.
