Lithium Bromide Absorption Chiller Carrier
Lithium bromide-water absorption systems. The LiBr-H 2 O system operates at a generator temperature in the range of 70-95 °C, with water used as a coolant in the absorber and condenser, and has a COP higher than the NH 3 -H 2 O systems. The COP of this system is between 0.6 and 0.8. A disadvantage of the LiBr-H 2 O systems is that their evaporator cannot operate at temperatures much below 5 °C, since the refrigerant is water vapor.

The concentration of the lithium bromide solution entering the absorber section is 63.5% (all concentration levels and temperatures are approximate). The lithium bromide solution then absorbs the refrigerant vapour from the evaporator section and is cooled from 50°C to 37°C by the cooling water.

Direct-Fired Double-Effect Absorption Chillers/Heaters
Commercial absorption chillers are either lithium bromide-water (LiBr/H 2 O) or ammonia-water equipment. In the LiBr/H 2 O system, lithium bromide is the absorber and water is the refrigerant. In the ammonia water system, water is the absorber and ammonia is the refrigerant.

How Absorption Chiller Works First of all a mixture, of around 50% lithium bromide and 40% water, is pumped from the absorber through the heat exchanger and then up into the generator. This line is referred to as the the weak solution line because the lithium bromide is mixed with water.

Absorption Chiller, How it works - The Engineering Mindset
The absorbent commonly used with water (the refrigerant) is lithium bromide. Lithium bromide, a nontoxic salt, has a high affinity for water. Also, when in solution with water, the boiling point of lithium bromide is substantially higher than that of water. This makes it easy to separate the refrigerant from the absorbent at low pressures.

An interesting point to note about absorption chillers is that they don't use conventional refrigerants. Instead they use water as the refrigerant, and this is mixed with either ammonia or Lithium Bromide. Lithium Bromide is more common because it is safer and non toxic, so we'll look at how the water Lithium Bromide type chillers work. You

Air-Cooled Lithium Bromide Absorption Chillers
The absorption chiller is widely used in refrigeration using low-grade heat. Absorption chillers employ heat and a concentrated salt solution (lithium bromide) to produce chilled water. An absorption chiller is comprised of four main parts namely generators, condensers, evaporators, and absorbers.

Absorption Chiller Market Size, Industry Analysis, Trends ...
Lithium Bromide solution used in absorption chiller requires close monitoring to ensure the long life of the chiller. If not properly controlled, Lithium Bromide is highly corrosive and can result in premature component failure, increased maintenance costs, unproductive downtime and shortened chiller life.
