Band Interleaved By Line Bil

Band interleaved by line (BIL) is one of three primary methods for encoding image data for multiband raster images in the geospatial domain, such as images obtained from satellites. BIL is not in itself an image format, but is a scheme for storing the actual pixel values of an image in a file band by band for

each line, or row, of the image.

Band Interleaved by Line (BIL) Image Encoding

The BIL (band-interleaved-by-line) encoding is a compromise format, allowing fairly easy access to both spatial and spectral information. To be interpreted properly, a BIL binary image file must have an associated ASCII header file.

Band Interleaved by Line (BIL) Image File

Band interleaved by pixel data is similar to BIL data, except that the data for each pixel is written band by band. For example, with the same three-band image, the data for bands 1, 2, and 3 are written for the first

pixel in column 1; the data for bands 1, 2, and 3 are written for the first pixel in column 2; and so on. See an example of a BIP file. Band sequential format stores information for the image one band at a time.
