Despite the hype around AI, most Machine Learning (ML)-based projects focus on predicting outcomes rather than understanding causality. Indeed, after several AI projects, I realized that ML is great at finding correlations in data, but not causation. In

our projects, we try to not fall into the trap of equating correlation with causation.

In covering two broad areas where machine learning is used, namely prediction, classification and causal effects, for each case we link the exposition to parametric benchmarks. For prediction we consider the piecewise nonlinear regression model, and high dimensional methods; and for causal effects we consider the specification of models with instrumental variables and treatment effects.

How Causal Inference Can Lead To Real Intelligence In Machines. by Ram Sagar. 28/11/2019. Last year, the machine learning community was thrown into disarray when its top minds Yann LeCun, Ali Rahimi and Judea Pearl had a faceoff on the state of artificial intelligence and machine learning. While Rahimi and Pearl tried to tone down the hype around AI, LeCun was aghast over the scepticism around intelligence and causality of the models.
