System dynamics is an aspect of systems theory as a method to understand the dynamic behavior of complex systems. The basis of the method is the recognition that the structure of any system, the many circular, interlocking, sometimes time-delayed relationships among its components, is often just as important in determining its behavior as the individual components themselves.

System dynamics - Wikipedia

System Dynamics is a computer-aided approach to policy analysis and design. It applies to dynamic problems arising in complex social, managerial, economic, or ecological systems

literally any dynamic systems characterized by interdependence, mutual interaction, information feedback, and circular causality (System Dynamics Society).

Modelling of Dynamic Capabilities: A System Dynamics Approach

A system dynamics approach is a simulation method in solving real-world problems to describe relationships among variables in complex real systems. The simulation method for the analysis of occupational accidents in the construction project is considered appropriate because of the probabilistic characteristic of variables that influence it.

The dynamics of a system are the result of the interplay of both positive and negative feedback processes. Perturbation reveals the nature of the system. A system can only be understood by the response pattern following a perturbation. A system may appear stable, for example, but become

rapidly unstable following a relatively small perturbation.
