This java applet is a simulation that demonstrates standing

waves on a vibrating string (a loaded string, to be precise). To set the string in motion, click "Center Pluck" or "Fundamental", or click on the string. Below the string you will see a graph showing each normal mode's contribution to the string's vibration.

Loaded String Simulation - Falstad

The problem to be solved is that of a wave propagating on a string, just like in the case of a guitar. In this notebook, we will use the simulation code written by Mr Langtangen for the case of a (transversely) vibrating string and perform extractions of the simulated data so as to visualize it.

Dr. Krishanthi Weerasinghe Fall 2020 d. Measure the amplitude. It is measured from the middle reference line to a crest (or a trough). You can drag the reference line to the position of a crest or a trough then measure between these reference lines. Amplitude (A) = ____ cm e. With the simulation paused, reset the timer and use the step button to determine the period of the wave.
