Canning | food processing | Britannica

The main factors in canned food preparation are heat sterilization and hermetic protective packaging. Rigid metal and glass containers are used for canned products. Flexible packaging is a new innovation. Canning procedures for fruits, vegetables, specialty products, meats and poultry, marine and dairy products are discussed.

Fundamentals of food canning technology - AGRIS

Canning is a method that sterilizes food by heat in airtight containers to achieve a commercially sterilized product, which allows food to be stored at room temperature while maintaining food safety and organoleptic quality for months or even years. There are two typical forms of canning: in-container sterilization (i.e., retort processing) and out-of-container sterilization (i.e., aseptic processing).

Canning - an overview | ScienceDirect Topics

Canning is the process of applying heat to food that's sealed in a jar in order to destroy any microorganisms that can cause food spoilage. Proper canning techniques stop this spoilage by heating the food for a specific period of time and killing these unwanted microorganisms. During the canning process, air is driven from the jar and a vacuum is formed as the jar cools and seals. Although you may hear of many canning methods, only two are approved by the United States Department of ...

Food Preservation Methods: Canning, Freezing, and Drying ...

Canning is a method of sterilizing food by heat in hermetically sealed (airtight) containers, which allows ready-to-eat foods that are neither frozen nor dehydrated to remain safe and wholesome during months or even years of storage at room temperature without the use of additives or preservatives.

Conventional Thermal Processing (Canning)

Since 1825 or so, canning has provided a way for people to store

foods for extremely long periods of time. In canning, you boil the food in the can to kill all the bacteria and seal the can (either before or while the food is boiling) to prevent any new bacteria from getting in. Since the food in the can is completely sterile, it does not spoil.

Canning Food | HowStuffWorks

Canning is a method of preserving food in which the food contents are processed and sealed in an airtight container. Canning provides a shelf life typically ranging from one to five years, although under specific circumstances it can be much longer. A freeze-dried canned product, such as canned dried lentils, could last as long as 30 years in an edible state. In 1974, samples of canned food from the wreck of the Bertrand, a steamboat that sank in the Missouri River in 1865, were tested by the Na
