10.5 Parametric
Surfaces In 10.1 we
described a space
curve by vector
function $\mathbf{r}(t)$ which
had a single
parameter, t . We
parametrically
represented a curve.
Today we'll describe a

parametric surface by
a vector function $\mathbf{r}(u, v)$
which has two
parameters, u and v .
One parameter is
needed for a curve in
space and two
parameters are needed
to describe a surface.

Parametric Surfaces As
in the situations of
space curves, many
surfaces cannot
be represented by
one equation. For instance,
the sphere $x^2 + y^2 + z^2 = 1$
has to be
represented by two
equations $z = \pm \sqrt{1 - x^2 - y^2}$: The
first one is the upper
half sphere, and the
second is the lower

half sphere.

10.5 Parametric Surfaces - Anoka-Ramsey Community College We will also use parametric equations of surfaces which will require two parameters. Think back to all of your equations of lines in 2-dimensions like $y = mx + b$ or $y - y_1 = m(x - x_1)$. What is needed to define a line in 2-dim.? $vab = \square \square, G$
