object recognition in man monkey and machine

Neural pathway crucial to successful rapid object recognition in primates. Recurrent processing via prefrontal cortex, necessary for quick visual object processing in primates, provides a key insight for developing brain-like artificial intelligence. MIT researchers used an object recognition task (e.g., recognizing that there is a "bird" and not an "elephant" in the shown image) in studying the role of feedback from the primate ventrolateral prefrontal cortex (vIPFC) to the inferior ...
