Design criteria for lean concrete - kth.diva-portal.org

The current Swedish design method for concrete pavements is straightforward but offers no flexibility when designing roads with, for instance higher traffic loads. The method calculates concrete thicknesses on the conservative side since only a limited number of parameters are treated.

The majority of concrete pavements are designed to be jointed without reinforcements. Jointed Reinforced Concrete Pavements

(JRCP): This format uses both joints and reinforcements, usually in the forms of deformed steel bars or welded wire fabric. The design is useful to hold the slab together, even if transverse cracks form.

The design models for both flexible and rigid pavements, to be mentioned in Chapters 5 and 6, require the strength of each layer of the pavement to be expressed as the elastic modulus. For granular soils, California Bearing Ratio (CBR) test is the most common way for determining the elastic modulus of subgrade.
