Chapter 11 Urinary System Flashcards | Quizlet

The urinary system includes the kidneys,

renal pelvis, ureters, urinary bladder, and urethra. The kidney filters the blood at the glomerulus, reabsorbs and secretes solutes and fluid in the renal tubules, and concentrates the urine in the medullary collecting ducts. Urine passes down the ureters to the bladder by gravity and peristalsis filling the urinary bladder.

Chapter 11 - Urinary System Foreign Language Flashcards ...

The urinary system has roles you may be well aware of: cleansing the blood and ridding the body of wastes probably come to mind. However, there are additional, equally important functions played by the system. Take for example, regulation of pH, a function shared with

the lungs and the buffers in the blood. Additionally, the regulation of blood pressure is a role shared with the heart and blood vessels.
