Abstract. Chiral ionic liquids derived from natural amino acids are shown to be green and efficient media for direct asymmetric aldol

reactions at room temperature catalyzed by (S)-proline. The corresponding aldol products were obtained with moderate to good enantioselectivities. A transfer of chirality from the chiral reaction media has been observed as well as the participation of match/mismatch interactions of the chiral medium with both enantiomers of proline.

Demonstrated here is that ionic liquids (ILs) can be employed as a chemical trapping agent to probe CO₂RR mechanistic pathways. This method is implemented by introducing a small amount of an IL ([BMIm][NTf₂]) to a copper foam catalyst, on which a wide range of CO₂RR products, including formate, CO, alcohols, and hydrocarbons, can be produced.
